Child restraints could be recalled for safety reasons. You must register this restraint to be reached in a recall. Send your name, address, e-mail address if available and the restraint’s model number and manufacturing date to:

Aria Child Inc.
P.O. Box 1415
New York, NY 10102-2195
or call 1-888-569-7288
or register online at:
http://www.urbinibaby.com/carseatregistration
Call the U.S. Government’s Vehicle Safety Hotline at 1-888-327-4236 (TTY:1-800-424-9153), or go to http://www.NHTSA.gov.

Certification

This child restraint conforms to all applicable Federal motor vehicle safety standards. This Restraint is Certified for Use in Motor Vehicles and Aircraft. It is not intended to be used in low-speed vehicles such as golf carts, ATV’s or any other non-certified vehicle.

If You Need Assistance or Have Questions

If you have any questions regarding installation of your child restraint, please contact us at:

Aria Child Inc.
530 Harrison Ave. Boston, MA 02118
1-888-569-7288
www.urbinibaby.com

For helpful information regarding child restraints:
www.NHTSA.gov
www.safercar.gov/parents/CarSeats.htm
www.seatcheck.org
DO NOT place rear-facing child seat on front seat with air bag. DEATH OR SERIOUS INJURY can occur. The back seat is the safest place for children 12 and under.

WHEN USED IN YOUR VEHICLE

• Owners of vehicles with side airbags should refer to their owner’s manual for child restraint installation instructions.

• ACCORDING TO CRASH STATISTICS, children are safer when properly restrained in rear vehicle seating positions, rather than in the front seating positions.

• REGISTER YOUR CHILD RESTRAINT with the manufacturer.

• READ AND UNDERSTAND the instructions in this manual, the labels on your seat and in your vehicle owner’s manual before installing your child restraint and base.

• IMPROPER USE OF THIS CHILD RESTRAINT and base could increase the risk of a serious injury or death in a sudden stop or car crash.

• FOLLOW ALL INSTRUCTIONS on this child restraint and in the written instructions stored under the seat.
• **USE ONLY WITH** children who weigh between 4 - 35 lbs (1.8 - 16 kg) and whose height is 32 inches (81 cm) or less. Child’s head **MUST** be 1” (2.5 cm) or more below the top of the seat.

• **SOME CHILDREN WITH SPECIAL NEEDS**, such as preemies or those who have tested positive for positional apnea, may be at increased risk of suffering breathing or other difficulties in a child restraint. Please consult a physician to determine what type of child restraint should be used for your child before using this product.

• **SNUGLY ADJUST** the belts provided with this child restraint around your child.

• **NEVER** use bulky clothing or blankets that will interfere with properly tightening the harness.

• **STRANGULATION HAZARD**: Child can strangle in loose restraint straps. Always use harness. **NEVER** leave child in carrier when straps are loose or undone.

• Children have **STRANGLLED** in loose or partially buckled harness straps. Fully restrain the child even when carrier is used outside the vehicle.
• **NEVER LEAVE CHILD UNATTENDED** in or around the vehicle. Vehicle backovers can happen in any type of vehicle. Vehicles have blind spots, the areas around the vehicle that you can not see from the driving position. Always check around the vehicle before moving your vehicle.

• **ALWAYS** lock an unoccupied vehicle. Children could easily climb into vehicles and lock themselves in causing heat exhaustion or hypothermia.

• **NEVER** leave a child alone in a parked car, even with the windows rolled down or the air conditioning on.

• **ONLY PLACE THIS CHILD RESTRAINT IN A REAR-FACING DIRECTION** on a forward facing vehicle seat when using it in a vehicle. Refer to page 21.

• **NEVER** place this child restraint on side-facing or rear facing vehicle seats.

• **SECURE THIS CHILD RESTRAINT** with the vehicle’s child restraint anchorage system (**LATCH**) if available or with a vehicle belt, never both.

• **ALWAYS TIGHTLY INSTALL THE CHILD RESTRAINT AND BASE TO THE VEHICLE SEAT**, since in a crash an unsecured child restraint system may injure other occupants.

• **TO PREVENT EJECTION, SECURELY ATTACH** the child restraint to the base and **LIFT UP TO CHECK** that it is attached.

• **MAKE SURE** nothing interferes with the carrier attachment to the base.
• **ALWAYS** store the **LATCH** connectors when they are not being used for installation.

• **NEVER** place two **LATCH** connectors on one vehicle **LATCH** anchor.

• **AFTER INSTALLING CARRIER WITHOUT BASE INTO THE VEHICLE,** check the **RED** level line on the side of seat to make sure that it is level with the ground.

• **DO NOT** allow children to play with the vehicle seat belts. A child within reach of a seat belt may become entangled if he or she pulls the seat belt all the way out and wraps the belt around his or her head, neck, or waist.

• **TO AVOID AN ACCIDENT, NEVER** tend to your child while driving. Always safely pull over and stop the vehicle before tending to your child.

• **NEVER** remove child from their child restraint while in a moving vehicle. Serious injury or death could occur in a sudden stop or crash.

• **NEVER USE INFANT CARRIER OR BASE IF IT HAS BEEN DAMAGED OR BROKEN OR ANY COMPONENT IS MISSING. DO NOT** use a cut, frayed or damaged child restraint harness, vehicle seat belt or **LATCH** belt.
WHEN NOT USED IN A VEHICLE

- **NEVER** leave child unattended.
- **SUDDEN DEATH HAZARD:** Infant carrier can roll over on soft surfaces and suffocate child. **NEVER** place carrier on beds, sofas or other soft surfaces.
- **STRANGULATION HAZARD:** Child can strangle in loose restraint straps. Always use harness. **NEVER** leave child in carrier when straps are loose or undone.
  - Children have **STRANGLED** in loose or partially buckled harness straps. Fully restrain the child even when carrier is used outside the vehicle.
- **FALL HAZARD:** Child’s movements can slide carrier. **NEVER** place carrier near edges of counter tops, tables, or other elevated surfaces.
  - **DO NOT** use on shopping carts.
- **NEVER USE INFANT CARRIER OR BASE IF IT HAS BEEN DAMAGED OR BROKEN OR ANY COMPONENT IS MISSING.** **DO NOT** use a cut, frayed or damaged child restraint harness, vehicle seat belt or **LATCH** belt.
• WHEN USING THE URBINI SONTI child restraint with a stroller, only use with the Urbini Emi, Swiftli, Reversi and Omni Plus strollers. Refer to your stroller USER GUIDE for stroller attachment instructions. NEVER use this child restraint with other manufacturer’s strollers or with strollers for which it was not intended.

• DO NOT carry the child restraint by the canopy or harness adjustment strap.

• DO NOT allow children to play with the child restraint.

• ALWAYS MAKE SURE handle is locked in the upright carrying position before lifting. An unlocked handle could result in serious injury to your child from falling from the child restraint.

• ALWAYS REPLACE THE CHILD RESTRAINT AND BASE AFTER A CRASH OF ANY KIND EVEN IF IT WAS UNOCCUPIED. A crash can cause unseen damage to the child restraint that may not be visible.

• DO NOT MODIFY YOUR CHILD RESTRAINT OR BASE or use any accessories or parts not supplied by the manufacturer of your child restraint.

• DISCONTINUE USE of this child restraint after 6 years from the manufacture date. The manufacture date can be found on the underside of your child restraint.
• THE CHILD RESTRAINT is certified for use in an aircraft when installing the carrier without base.

• THE CHILD RESTRAINT MAY BECOME VERY HOT IF LEFT IN THE SUN OR HOT AREAS. Always make sure to check the temperature of any metal or plastic parts before placing your child in the child restraint.

• NEVER allow someone else to use this child restraint and base without also passing along this manual to them.

• NEVER use a second-hand child restraint or base or a child restraint or base that you do not know its history.
The American Academy of Pediatrics recommends children should ride rear-facing for as long as possible up to 2 years in age, or until they reach maximum height and weight for their seat. Do not use this child restraint beyond the expiration date or if the child exceeds the limits of this seat.

Your child **MUST** meet the height and weight requirements listed:

- **Weight**: 4 - 35 lbs. (1.8 kg-16 kg)
- **Height**: 32 inches (81 cm) or less.

- Harness straps must be adjusted to be **AT** or **JUST BELOW** child’s shoulders
- **CHILD’S HEAD MUST** be 1” (2.5 cm) or more below the top of the seat as shown below

Hold up to top of seat to check for 1” spacing.
1. Recline foot  
2. LATCH storage bars  
3. Vehicle belt path  
4. Recline Indicator  
5. Carrier attachment bars  
6. Recline foot adjustment knob  
7. LATCH connector  
8. LATCH adjustment strap button  
9. LATCH adjustment strap  
10. LATCH strap  
11. Extra Grip Belt Lock-Off  
12. Extra Grip Belt Lock-Off release tab

23. Harness buckle strap retainer
24. User guide storage compartment
**WARNING**

**ALWAYS** make sure the handle is securely locked in the upright carrying position (A) before carrying. **ANY** locked position can be used in vehicle.

There are 4 positions:
- Carrying position (A),
- Middle positions (B - C),
- Stationary position (D).

To adjust, squeeze handle adjustment buttons on both sides, then rotate the handle. The handle will lock into position.

You should hear a click when the handle button is engaged and handle is locked into position.

**ALWAYS CHECK** to make sure handle is locked into place after adjusting.
To attach canopy, insert the canopy bow into the canopy mounts on both sides of the seat until they click into place.

Fasten the hook under the edge of the seat pad as shown. Repeat on other side of seat.

To remove, press tab on canopy bow and pull out. Canopy can be removed for washing.
LATCH stands for Lower Anchors and Tethers for Children.

It makes installation easier without using the vehicle’s seat belts. LATCH is a way to secure your child restraint to your vehicle by using the LATCH connectors on your child restraint base. These connectors attach to the lower anchor points in certain vehicle seating positions.

The child restraint base is designed to be used at the standard spacing of 11” from the center of one anchor point to the center of another anchor point. Please refer to your vehicle owner’s manual for information about using LATCH in certain seating positions.

LATCH may be used for spacing larger than 11” ONLY if your vehicle manufacturer allows it. If your vehicle does not have lower anchor points you can still install your child restraint with the vehicle’s belt system.
Failure to place the child restraint in a correct seating position increases the risk of serious injury or death. DO NOT place rear-facing child seat on front seat with air bag. DEATH OR SERIOUS INJURY can occur. The back seat is the safest place for children 12 and under. Owners of vehicles with airbags should refer to their owner’s manual for child restraint installation instructions.

The VEHICLE seat MUST face forward.

NEVER place the child restraint on any vehicle seat that does not lock. Folding seats can fall forward and could cause serious injury to your child in a vehicle crash.
If you have any of these types of vehicle belt systems listed, **NEVER** use any of these to install your child restraint in the vehicle. These vehicle belt systems are **UNSAFE** to use to install your child restraint in the vehicle.

If available, **LATCH** can be used **IN PLACE OF** these vehicle belt types. Refer to your vehicle owner’s manual for **LATCH** locations.

**Motorized Shoulder Belt with Lap Belt**

Motorized belts will not keep a child restraint in its seating position in a sudden stop or crash.

**Lap or Shoulder Belt Mounted on Vehicle Door**

These belts are mounted to a door and will not keep a child restraint in its seating position in a sudden stop or crash.
Non-Locking Lap Belts with Emergency Locking Retractor (ELR)

The lap belt is always loose until it locks in a sudden stop or crash.

Lap/Shoulder Belts with 2 Retractors (including inflatable seat belts)

Belts are attached to retractors at the ends of the lap and shoulder belt and attached to one latch plate.
If you have any of these types of vehicle belt systems listed, these are **SAFE** to use to install your child restraint in the vehicle. Review vehicle owner’s manual for specific instructions on child restraint installation.

**LATCH** can be used **IN PLACE OF** these vehicle belt types. Refer to your vehicle owner’s manual for **LATCH** locations.

![Lap Belt with Locking Latch Plate](image)

The vehicle belt is tightened by pulling on the free end of the strap until the belt is tight.

![Lap Belt with Automatic Locking Retractor (ALR)](image)

The automatic locking retractor does not allow the lap belt to get longer once it is buckled. The vehicle belt is tightened by feeding seat belt webbing into retractor.
☑️ Lap/Shoulder Belt with Locking Latch Plate

The lap portion of this belt does not loosen once the belt is buckled. The vehicle belt is tightened by pulling up hard on shoulder belt and feeding the webbing into the retractor.

☑️ Lap/Shoulder Belt with Sliding Latch Plate with Locking Retractor

The latch plate slides freely along the lap/shoulder belt. Vehicle belts with sliding latch plates are typically locked at the retractor by pulling all of the webbing out slowly to switch the retractor.

Check vehicle owner’s manual for specific instructions. The vehicle belt is tightened after switching the retractor by pulling up hard on shoulder belt and feeding the webbing into the retractor.
Before installing base, make sure vehicle is on level ground. Place base on an approved LATCH vehicle seating location.

Remove LATCH straps from LATCH storage bars on the bottom of the base by unhooking them from the storage bars.

Open the Extra Grip Belt Lock-off by first pressing down on the lock-off and then by pressing back on the release tab as shown. Lift Lock-off up as shown.
Extend the strap to its longest length by pushing button on adjuster to loosen LATCH.

Route the LATCH belt through the belt path openings on both sides of base and under the belt lock-off. Make sure not to twist the belt and make sure it lies flat.

NOTE: LATCH adjustment strap button will be on the side of base as shown.
Place the base in a rear-facing position on a forward-facing vehicle seat.

Clip the LATCH connectors onto the vehicle lower anchor points on both sides of the base until you hear them CLICK onto the anchor points.

**CHECK** to make sure they are securely attached by pulling on them.

Pull the LATCH adjustment strap while pushing base tight against the seat. Continue to pull on the adjustment strap to remove all the slack from the LATCH strap and to get the base snug against the vehicle seat.

Lay the free end of the belt across the belt path so it will be under the Lock-Off. Close the Lock-Off.
CHECK to make sure base is secure by holding both sides of the base near the LATCH strap and moving it from side to side and front and back. The LATCH belt should not loosen and the base should not move easily. The base should not move more than 1 inch (2.5 cm) from side to side or front to back.

Attach the carrier into the base until you hear a click.
Lift up on the handle of the carrier to make sure that it is securely attached in the base. **ALWAYS** lift up on the carrier to check that it is securely attached to base.

**CHECK** the recline indicator to make sure the base is correctly reclined. If it is not correctly reclined, remove **LATCH** connectors and adjust the foot on the base then re-install base. **CHECK** that the base is correctly reclined. Refer to pages 46-48 for Adjusting the Recline.

To remove the carrier from the base, squeeze the red release handle at the back of the carrier. Lift carrier away from the base.
To remove base, push down on the lock-off then press the tab to open the lock-off.

Push button on adjuster to loosen **LATCH** then unhook from the anchor point. Repeat steps as shown on the other side of the base.

Store **LATCH** strap on the storage bars by hooking both of the **LATCH connectors** onto the storage bars on the bottom of the base.

Close the lock-off.
BEFORE installing base, make sure vehicle is on level ground. Place base on an approved vehicle seating location.

Open the Extra Grip Belt Lock-off by first pressing down on the lock-off and then by pressing back on the release tab as shown 1. Lift Lock-off up as shown in 2.

Place the base in a rear-facing position on a forward-facing vehicle seat.
Route the lap/shoulder belt through the belt path openings on both sides of base. Make sure not to twist the belts and make sure they lie flat. Fasten the buckle until it clicks into place. Pull shoulder belt to remove all the slack from the vehicle belt and to get the base snug against the vehicle seat. Close the lock-off until it clicks into place.

**CHECK** to make sure base is secure by holding both sides of the base near the vehicle belt and moving it from side to side and front and back. The lap/shoulder belt should not loosen and the base should not move easily. The base should not move more than 1 inch (2.5 cm) from side to side or front to back.
Attach the carrier into the base until you hear a click.

⚠️ Lift up on the handle of the carrier to make sure that it is securely attached in the base. **ALWAYS** lift up on the carrier to check that it is securely attached to base.

CHECK the recline indicator to make sure the base is correctly reclined. If it is not correctly reclined, remove vehicle belt and adjust the foot on the base then re-install base. **CHECK** that the base is correctly reclined. Refer to pages 46-48 for Adjusting the Recline.
To remove the carrier from the base, squeeze the red release handle at the back of the carrier. Lift carrier away from the base.

To remove the base from vehicle, open the lock-off and unbuckle the belt.
Base Installation with Lap Belt

**BEFORE** installing base, make sure vehicle is on level ground. Place base on an approved vehicle seating location.

Open the Extra Grip Belt Lock-off by first pressing down on the lock-off and then by pressing back on the release tab as shown 1. Lift Lock-off up as shown in 2.

Place the base in a rear-facing position on a forward-facing vehicle seat.
Route the lap belt through the belt path openings on both sides of base. Make sure not to twist the belts and make sure they lie flat. Fasten the buckle until it clicks into place. Pull lap belt to remove all the slack from the vehicle belt and to get the base snug against the vehicle seat.

Close the lock-off until it clicks into place.

**CHECK** to make sure base is secure by holding both sides of the base near the vehicle belt and moving it from side to side and front and back. The lap belt should not loosen and the base should not move easily. The base should not move more than 1 inch (2.5 cm) from side to side or front to back.
Attach the carrier into the base until you hear a click.

⚠ Lift up on the handle of the carrier to make sure that it is securely attached in the base. **ALWAYS** lift up on the carrier to check that it is securely attached to base.

**CHECK** the recline indicator to make sure the base is correctly reclined. If it is not correctly reclined, remove vehicle belt and adjust the foot on the base then re-install base. **CHECK** that the base is correctly reclined. Refer to pages 46-48 for Adjusting the Recline.
To remove the carrier from the base, squeeze the red release handle at the back of the carrier. Lift carrier away from the base.

To remove the base from vehicle, open the lock-off and unbuckle the belt.
BEFORE installing carrier, make sure vehicle is on level ground. Place carrier on an approved vehicle seat location in a rear-facing position.

Route the lap belt portion of the vehicle belt through the lap belt guides on both sides of carrier. Make sure not to twist the belt and make sure it lies flat.

NEVER place the shoulder portion of the vehicle belt under the lap belt guides. Always position shoulder portion of vehicle belt against the back of the vehicle seat.

Fasten the vehicle belt to the buckle until it clicks into place. If vehicle belt latch plate does not lock, then retractor must be switched. CHECK the vehicle owner’s manual and page 22-25 to see how to lock your seat belt.
Push down in center of carrier and pull the shoulder belt portion of the vehicle belt to tighten carrier against the vehicle seat. **CHECK** to make sure carrier is secure by holding both sides near the lap belt guides and moving it from side to side and front and back. The lap belt should not loosen and the carrier should not move easily. The carrier should not move more than 1 inch (2.5 cm) from side to side or front to back.

After installing carrier without base check the **RED** level line on the label to make sure that it is level with the ground.

If seat is still not level, refer to page 44-45, **when using the carrier WITHOUT the base.**
BEFORE installing carrier, make sure vehicle is on level ground. Place carrier on an approved vehicle seat location in a rear-facing position.

Route the lap belt through the lap belt guides on both sides of carrier. Make sure not to twist the belt and make sure it lies flat.

Fasten the vehicle belt to the buckle until it clicks into place. If vehicle belt latch plate does not lock, then retractor must be switched. CHECK the vehicle owner’s manual and page 22-25 to see how to lock your seat belt.
Push down in center of carrier to tighten carrier against the vehicle seat while pulling on the free end of the vehicle belt. Once tightened, tuck the free end of the strap near the vehicle seat crease.

**CHECK** to make sure carrier is secure by holding both sides near the lap belt guides and moving it from side to side and front and back. The lap belt should not loosen and the carrier should not move easily. The carrier should not move more than 1 inch (2.5 cm) from side to side or front to back.

After installing carrier without base check the **RED** level line on the label to make sure that it is level with the ground.

If seat is still not level, refer to page 44-45, **when using the carrier WITHOUT the base**.
Improper recline of your child restraint or base could cause serious injury or death.

If the child restraint is too upright, an infant’s head could drop forward and cause suffocation or breathing problems.

If the child restraint is too reclined, a sudden stop or vehicle crash could cause injury to a child’s neck or shoulders.

When using the carrier WITHOUT base:
1) Make sure vehicle is on level ground.

2) Check the **RED** level line on the label to make sure that it is level with the ground.

3) If it is not level, see page 45 on how to adjust carrier with rolled towel.
When using the carrier WITHOUT the base, ALWAYS CHECK the red level line on the carrier each and every time you use your child restraint to make sure it is level with the ground. If it is not, place a tightly rolled towel under the foot end of the carrier as shown to level it.

ALWAYS check that your child is in a comfortable position and has not slid down in the seat or moved into an awkward position. Their head should be flat against the carrier and not tilted toward their chest.

NEVER place a rolled towel under the child’s head end of the carrier. If towel is used to adjust the seat installation angle, it must only be used in position shown.
The base has 4 recline adjustment positions for the foot.

**To extend the foot,** turn and pull up on the knob, and place foot into one of the 4 positions until it locks into place.

**To retract the foot,** turn the knob and push down on the base until the foot locks into desired position.
When using the carrier and the base together:

1) Make sure vehicle is on level ground.

2) Only use the recline indicator on the base to make sure the seat and base are correctly reclined.

3) Recline base until the white line is in the correct color zone for your child’s weight:

**Blue : 4-20lbs**
(1.8 -9 kg)

**Green : 20-35lbs**
(9 -16 kg)

**NEVER** allow white line to appear in the red zone. The recline is **NOT** correct.

If seat is still not correctly reclined, see Adjusting the Recline.
When using the carrier with the base, if the foot is in the raised position and the white line appears in the red zone you may need to place a tightly rolled towel under the foot end of the base in order to get the seat to become properly reclined.

NEVER place a rolled towel under the child’s head end of the base. If towel is used to adjust the seat installation angle, it must only be used in position shown.
Improper placement of the harness straps and buckle strap increases the risk of serious injury or death in a sudden stop or vehicle crash.

Depending on whether you have a smaller or larger size child, you will need to adjust newborn body support, harness strap positions, buckle strap and waist strap locations. Please review the following sections on pages 49-63 before changing any strap positions.

- **Larger**: 20 - 35 lbs
Placing Your Child in the Carrier

Rotate handle out of the way and place child in carrier. Place your child in the carrier with their bottom pushed back and their back flat against the seat.

You will need to check the proper placement for the harness strap position. The harness strap position should be at or just below the child’s shoulders.

If you need to change the harness strap position, remove child from child restraint and follow these steps to change the harness strap position:
From the front of seat, you will need to loosen the harness straps to be able to remove the harness from the splitter plate. Push the harness adjuster button and pull the harness straps toward you.

Turn the seat over and remove the harness straps from the splitter plate as shown.

Turn the seat back over to the front side and pull the straps out of the slots and re-insert them into the slots that are at or just below your child’s shoulders.

Make sure you place them through the same set of slots in the seat pad and the seat shell.
Attach harness straps to the splitter plate depending on the size of your child:

**For Preemie or Newborn Babies:**
Thread harness straps through either slots 1 or 2 depending on the size of your child and attach loops to splitter plate.

**For Medium or Larger Babies:**
Thread harness straps through either slots 3 or 4 depending on the size of your child and attach loops to splitter plate.

⚠️ **CHECK STEP:** Make sure harness straps are not twisted and double check that they are completely on the splitter plate.
Position the harness straps around the child’s arms and the buckle strap between the child’s legs, then fasten the chest clip and the buckle.

Pull all slack out of the harness system, starting with the webbing around the child’s legs and moving up toward their shoulders.
Pull the adjustment strap to tighten the harness on the child’s shoulders. The harness height should be at or just below the child’s shoulders.

Chest clip should be at armpit level.

**CHECK** the child’s head MUST BE 1” (2.5 cm) or more below the top of the seat as shown.

Hold up to top of seat to check for 1” spacing.
Changing the Buckle Strap Position

Turn the carrier over and push the metal retainer through the slot and pull buckle strap out of the front of the seat and through the seat pad.

Depending on the size of your child you will need to use the slot closest to but not under your child:

**For Newborn Babies:** Use rear slot.

**For Medium Babies:** Use middle slot.

**For Larger Babies:** Use front slot.

**For Preemie Babies:** Use rear slot and insert retainer up through the middle slot.

**NOTE:** If you have any questions at all about choosing the right buckle strap slot for your size child, please contact Customer Service at 1-888-569-7288 and we will be happy to walk you through it.
Push metal retainer through the slot that fits closest to your child but not under your child.

The metal retainer **MUST** go through the same set of slots in the seat pad and the carrier shell.

Pull up on the buckle strap from the front of the seat to make sure the strap is secured on the bottom of the seat and not on the bottom of the seat pad.

**CHECK** to make sure the red button on buckle is pointing away from seat as shown.
Changing the Waist Strap Position

For Preemie Babies:
In order to change waist strap positions, you will need to follow these steps.

1) Loosen the harness straps by pushing in on the harness adjustment button and pulling the straps forward.

2) Pull back the front of the seat pad to expose the waist strap slots and retainers. To remove waist straps from the slots, you will need to push retainer through to the bottom of the seat and pull strap up through the top of the seat.
To use for preemie, push the retainer through to the bottom of the seat through the *inner* slots then up through the *outer* slots. Retainer must lie flat against top of seat.

**MAKE SURE** harness straps are not twisted or that the harness adjustment strap does not get caught between the waist straps.

**CHECK** that the retainers are flat against the inside of the shell.

Reassemble seat pad to shell.
In order to change waist strap positions, you will need to follow these steps.

1) Loosen the harness straps by pushing in on the harness adjustment button and pulling the straps forward.

2) Pull back the front of the seat pad to expose the waist strap slots and retainers. To remove waist straps from the slots, you will need to push retainer through to the bottom of the seat and pull strap up through the top of the seat.
To use for newborn or medium babies, push the retainer through to the bottom of the seat through the middle slots then up through the outer slots. Retainer must lie flat against top of seat.

**MAKE SURE** harness straps are not twisted or that the harness adjustment strap does not get caught between the waist straps.

**CHECK** that the retainers are flat against the inside of the shell.

Reassemble seat pad to shell.
For Larger Babies:

In order to change waist strap positions, you will need to follow these steps.

1) Loosen the harness straps by pushing in on the harness adjustment button and pulling the straps forward.

2) Pull back the front of the seat pad to expose the waist strap slots and retainers. To remove waist straps from the slots, you will need to push retainer through to the bottom of the seat and pull strap up through the top of the seat.
To use for larger babies, push the retainer through to the bottom of the seat through the **outer** slots then up through the **middle** slots. Retainer must lie flat against top of seat.

**MAKE SURE** harness straps are not twisted or that the harness adjustment strap does not get caught between the waist straps.

**CHECK** that the retainers are flat against the inside of the shell.

Reassemble seat pad to shell.
Newborn body support is intended to be used to help infant fit more comfortably in the seat. It is not required to be used but is an added feature.

To make newborn body support fit better:

- To prevent child slouching or sliding down into the buckle strap, add a small washcloth around the buckle strap.

Some children require extra side support. You can use rolled towels as shown.

**WARNING**

NEVER place rolled towels above the head.
WARNING

Improper placement of the harness straps and buckle strap increases the risk of serious injury or death in a sudden stop or vehicle crash.

1. Rotate handle out of the way. Push the harness adjuster button then pull the harness straps toward you.

2. Open the chest clip by pressing the button in the center as shown.

3. Separate the two pieces as shown and move the straps out of the way.
Place your child in the carrier with their bottom pushed back and their back flat against the seat. Place the harness straps around your child.

Insert the buckle tongues into the buckle as shown. **MAKE SURE** you hear each buckle tongue click into place. **DO NOT** use child restraint if buckle tongues **DO NOT** click into the buckle. Try cleaning the buckle. If this does not remedy the problem, please call **Customer Service 1-888-569-7288** before using the child restraint.

Fasten chest clip together and pull all slack out of the harness system, starting with the webbing around the child’s legs and moving up toward their shoulders.
Slowly pull harness adjuster strap to make the shoulder straps snug around the child’s shoulders. **BE CAREFUL** not to allow the chest clip to slide up into their neck when tightening.

Center chest clip on child’s chest level with their armpit.

**CHECK** to make sure harness is **AT** or **JUST BELOW** the child’s shoulders.

**CHECK STEP: MAKE SURE** the straps are flat, not twisted and snug. If you can pinch a fold in the strap it is not snug.

A snug strap should not allow any slack. It lies in a relatively straight line without sagging. It does not press on the child’s flesh or push the child’s body into an unnatural position.
Store LATCH strap on the storage bars by hooking both of the LATCH connectors onto the storage bars on the bottom of the base.

Close the lock-off.
Instruction Manual Storage

Insert the manual behind the clips on the underside of the seat as shown below.
Cleaning the Seat Pad / Infant Body Support:
Refer to the care tag on your seat pad for washing instructions. **NEVER** use carrier without the seat pad attached.

Cleaning the Harness and Shell:
Wipe clean with damp cloth. Do not use any other cleaning agents or bleach.

Harness Straps:
Wipe clean with damp cloth. **DO NOT SOAK** straps in water or launder in washing machine as this may weaken them.
Food, drink or other debris may collect inside the harness buckle which can affect proper function.

Wash in warm water until clean. When inserting the buckle tongues, be sure you can hear an audible click to make sure the buckle is working properly.

**DO NOT** use child restraint if buckle tongues **DO NOT** click into the buckle. *Try cleaning the buckle. If this does not remedy the problem, please call Customer Service 1-888-569-7288 before using the child restraint.*

Do not use detergents or lubricants.
